

## REDUTOR MKSD

A linha de redutores **MKSD** foi desenvolvida para atender aplicações que necessitam de altas taxas de redução. O redutor duplo consiste na junção de dois redutores, assim possibilitando variar reduções de 1 X 150 a 1X1000. Estruturado com carcaça robusta, bronze centrifugado e demais componentes adequados ao uso, resultam em um conjunto eficiente.

## TABELA DE POTÊNCIA

Tabela de potência de entrada e torque de saída para redução dupla - Motor 4 POLOS 60Hz 1700RPM						
MODELO	Redução	Pot. (CV)	MT (Kgm)	RPM	Fs	$\eta$
MKSD 50 - 30	1x150	0,25	10,9	11,3	1	72,0 %
	1x200	0,16	10,0	8,5	1	71,0 %
	1x225	0,16	10,7	7,5	1	67,0 %
	1x250	0,16	10,9	6,8	1	62,0 %
	1x300	0,16	*12	5,6	1	57,0 %
	1x375	0,12	11,2	4,5	1	59,0 %
	1x400	0,16	*12	4,25	1	65,0 %
	1x450	0,12	*12	3,77	1	57,0 %
	1x500	0,12	*12	3,4	1	58,0 %
	1x600	0,12	*12	2,8	1	56,0 %
	1x750	0,12	*12	2,26	1	52,0 %
1x800	0,12	*12	2,16	1	56,0 %	
1x1000	0,12	*12	1,7	1	51,0 %	
MKSD 63 - 40	1x150	0,5	24,4	11,3	1	77,0 %
	1x200	0,5	*26	8,5	1	72,0 %
	1x225	0,5	*26	7,5	1	73,0 %
	1x250	0,5	*26	6,8	1	68,0 %
	1x300	0,25	20	5,6	1	66,0 %
	1x375	0,25	24,7	4,5	1	65,0 %
	1x400	0,25	*26,0	4,25	1	66,0 %
	1x450	0,25	*26,0	3,77	1	64,0 %
	1x500	0,16	21,4	3,4	1	61,0 %
	1x600	0,16	24,8	2,8	1	59,0 %
	1x750	0,12	22,1	2,26	1	58,0 %
1x800	0,12	24,9	2,16	1	62,0 %	
1x1000	0,12	*26	1,7	1	59,0 %	

MODELO	Redução	Pot. (CV)	MT (Kgm)	RPM	Fs	$\eta$
MKSD 75 - 40	1x150	0,75	35*	11,3	1	77,0 %
	1x200	0,75	35*	8,5	1	72,0 %
	1x225	0,5	34,4	7,5	1	73,0 %
	1x250	0,5	*35	6,8	1	68,0 %

## INFORMAÇÕES TÉCNICAS

**Instalação:** Os redutores da classe MKS e MKSD são fornecidos com lubrificação, não necessitam de lubrificação adicional. Devem ser instalados sobre uma estrutura rígida e plana, assim evitando desalinhamentos e esforços adicionais. Os elementos montados nos eixos como polias, correias, motores, acoplamentos e outros, devem ser montados sem esforços, para não danificar componentes internos do redutor. O uso de prensa ou martelo na montagem desses elementos danificam os rolamentos do redutor. Em caso do uso de polias e acoplamento os mesmos devem ser balanceados dinamicamente. Evitar a montagem na extremidade dos eixos, utilizando o encosto dos eixos como referência de apoio. Para os redutores fornecidos com motor, é necessário observar as características da rede elétrica, para proceder à instalação.
